Science at Pondhu engages all learners in actively investigating and exploring the world around them.

It aims to enhance children's connection to the natural world, develop their creative and critical thinking skills, as well as foster a sense of curiosity, awe and wonder.

We are curious and eager to investigate.

We develop our thinking through scientific discussion and key vocabulary.

We do lots of 'hands on' learning and we explore and discover for ourselves.

We develop a sense of awe and wonder at the world.

We see science all around us and in our futures. We know we can become scientists.

Science at Pondhu

Children are encouraged to think creatively about how they can answer their own questions using a range of enquiry types.

Children are given opportunities to talk as scientists. They are encouraged to question, compare, observe, analyse and explain using key vocabulary.

The progression of enquiry skills and conceptual understanding is carefully planned for and clearly evident.

Children take part in well planned and engaging science lessons and other enrichment activities.

Children are educated about the role of science in the modern world and know they can be active participants in improving its future.
